

Requirements for Mini Mecos

Summary

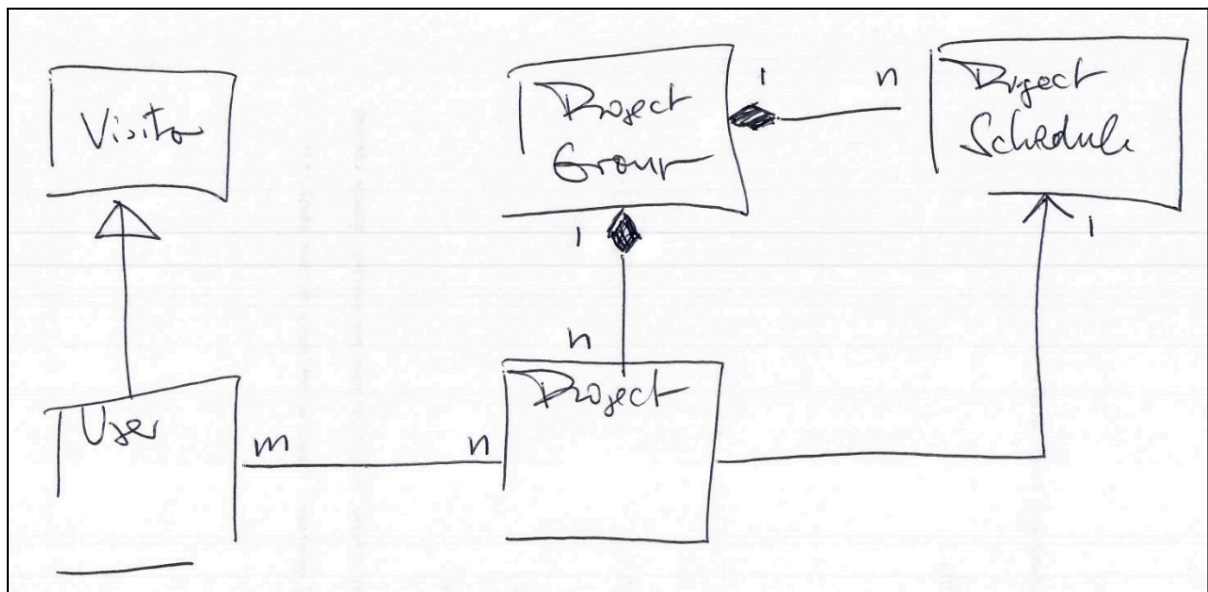

- Mini Mecos is a software application that provides agile methods teams simple tooling for their projects.
- For us, here, agile methods tooling is what we need for our course AMOS (agile methods and open source).
- In addition, Mini Mecos serves as a teaching example in our course ADAP (advanced design and programming).

Tech stack

- Mini Mecos uses as few frameworks as possible to make learning the code base as simple as possible.
- Mini Mecos is a NodeJS application with a React-based user interface.
- All data is stored in an SQLite database.

Key data structures

Users and projects

User

- A user has their email address as their name, and a password
- There are two types of users, regular and admin
- A user has a flag identifying them as an admin
- A user has a status life-cycle: Unconfirmed, active, deactivated
- A user can be a member of any number of projects

Project

- Plugins are view/model combinations
- Plugins start with feature view/model combinations

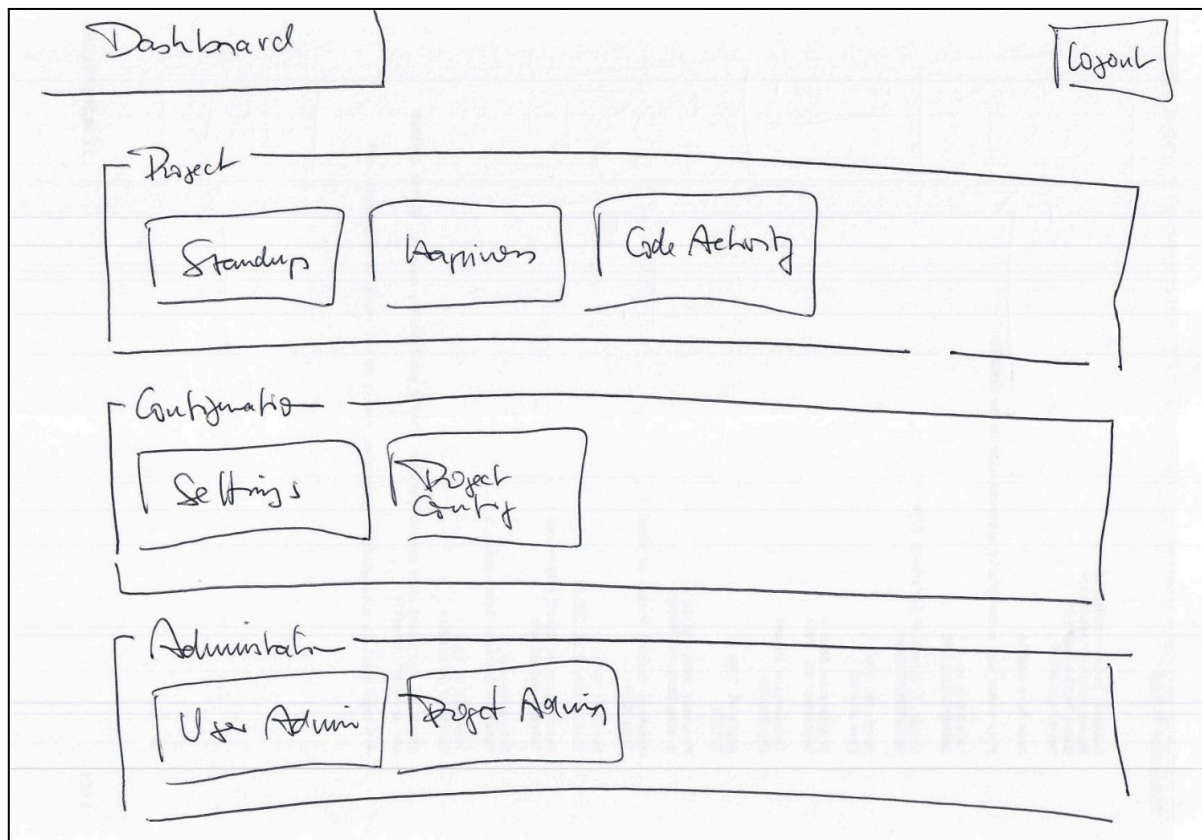

Functionality

Login screen

The sketch shows a login screen layout. At the top left, the text "Front page" is written and enclosed in a box. Below this, the word "Welcome" is written in the center. Underneath "Welcome", the text "username (email address)" is written above a rectangular input field. Below this field, the word "password" is written above another rectangular input field. At the bottom left, there is a small square button labeled "login". To the right of the "login" button, the word "Sign up" is written.

- Visitors see a welcome page with a login opportunity.
- Visitors can register to become a user and login.
- Users can trigger a password reset email.
- There is one predefined admin user email address, dirk@riehle.org.

Main screen

- The app is hierarchically structured into components; each component has its own view (UI) and its own model
- The component hierarchy has three layers: Dashboard, category, feature

The main screen (after login) shows the dashboard; the dashboard groups categories on the screen; within categories, there are features

- Dashboard
 - Projects
 - Standups
 - Happiness
 - Code activity
 - Configuration
 - Settings
 - Project config
 - Administration
 - User admin
 - Project admin

Dashboard

- The dashboard has a current user attribute
- The dashboard contains categories as subcomponents
- Visually, the dashboard is the main screen

Project category

- The projects category is a subcomponent of the dashboard
- It offers all features for software development (standups, happiness, coding) as subcomponents
- It has a current project attribute (that can be changed to another project for which the user is

registered)

- Visually a category like projects is a subsection of the dashboard and a frame around the features

Projects category

- In all project feature screens, the user can change their current project from the list of projects they are registered to

Projects / standups

Standup Emails

Done

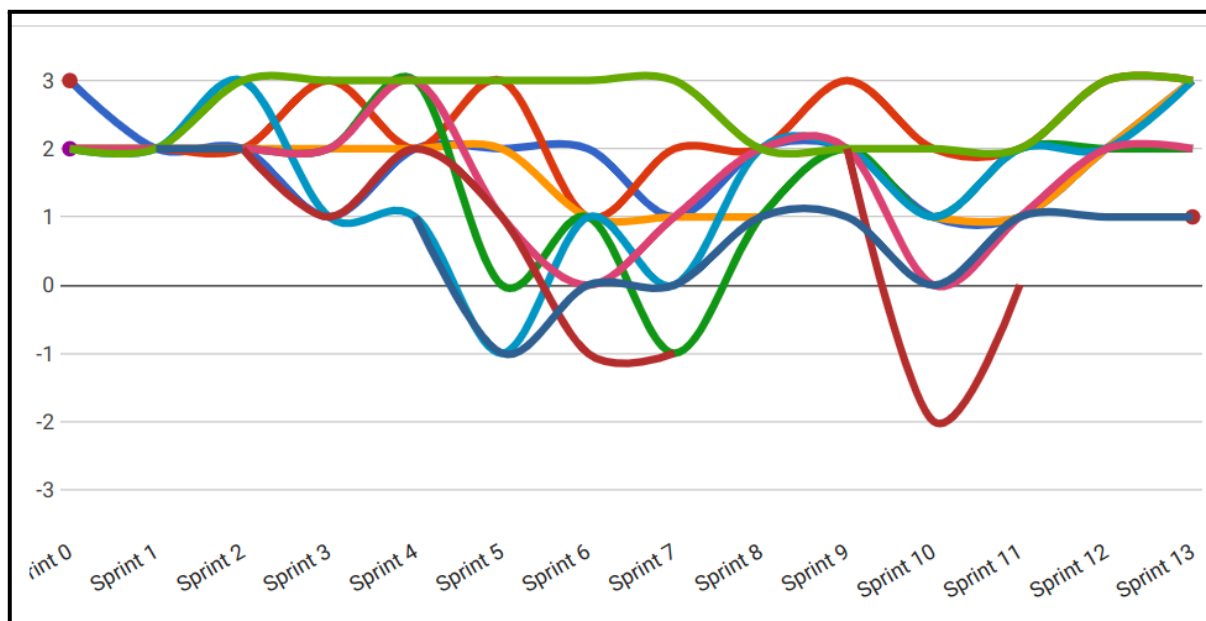

Plans

Challenges

Send Email

- The standups feature lets a user send everyone a standup email

Projects / happiness

- The happiness feature lets a user declare their happiness for the current time box.
- It shows the project team's happiness over time (as a graph)
- All users on the happiness index are anonymous to each other (just curves)

Admin interface for project happiness index

Happiness Index

>>Courses / AMOS #22 (Summer 2024) / Course configuration

General

Course Name: AMOS #22 (Summer 2024)

Standup email
address: oneofus@group.riehle.org

Institution: FAU, FUB, TUB

Sprints

Time of day:
11:59 PM

Enddate of sprints:

04/17/2024	<input type="button" value="🗑"/>
04/24/2024	<input type="button" value="🗑"/>
05/08/2024	<input type="button" value="🗑"/>
05/15/2024	<input type="button" value="🗑"/>
05/22/2024	<input type="button" value="🗑"/>
05/29/2024	<input type="button" value="🗑"/>
06/05/2024	<input type="button" value="🗑"/>
06/12/2024	<input type="button" value="🗑"/>
06/19/2024	<input type="button" value="🗑"/>
06/26/2024	<input type="button" value="🗑"/>
07/03/2024	<input type="button" value="🗑"/>
07/10/2024	<input type="button" value="🗑"/>
07/17/2024	<input type="button" value="🗑"/>
07/24/2024	<input type="button" value="🗑"/>

Projects / Code activity

- The coding feature shows the users # of commits for a given timebox (as a graph)

Configuration category

Configuration / settings

- Regular users can change their email address, admins cannot
- Users can change their password
- Users can join or leave a project; they can see all projects

Configuration / project config

- The user can select a project they are a member of
- The user can set and change the git URL for the project

Administration category

- The administration category and features require that the user be an admin

Administration / user admin

- The admin can see three separate lists of users, by status (unconfirmed, active, deactivated)
- For unconfirmed users
 - The admin can send unconfirmed users a password reset email
- For active users
 - The admin can deactivate an active user
 - The admin can deactivate all active regular users
- For deactivated users
 - The admin can activate a user

Administration / project admin

- The admin can CRUD a project group

- Delete is not possible as long as there are projects in the group
- The admin can CRUD a project
 - A project has a name and belongs to a group

Code organization

All code belonging to one domain is captured as one plugin and gets one folder for its source code.
